Call for Peer Reviewers: History of Applied Science and Technology

The *History of Applied Science and Technology* editors are seeking peer reviewers for all regions and all periods.

About the Project

Our vision is to produce a high quality, peer-reviewed, open access textbook to meet the needs of History of Science and Technology courses at centers of higher education around the world.

Our book is targeted to 100-level college courses and will be freely available to students and openly licensed for reuse and adaptation by instructors.

This textbook takes a global approach and will center on the theme of the transformative impact of technological and epistemological changes on worldview and human behavior as they relate to everyday life and global choices. As an open resource, this book is the first of its kind in its subject area.

About Us

We are a team of editors from the Maryland University System, the University of North Dakota, and Linfield College. We work collaboratively with support from the Rebus Community and The Digital Press @ UND, which is an open access publisher. Rebus is a nonprofit initiative funded by the Hewlett Foundation, dedicated to building a new collaborative model of open textbook publishing.

About You

We seek scholars with experience teaching first-year World History courses. We welcome queries from faculty and PhD students. We encourage interest from members of underrepresented groups within the history community.

You share a vision in line with our CC-BY license through Creative Commons, which will allow for the greatest possible dissemination and flexibility. You will retain copyright for any sections that you may choose to author yourself, and you will be attributed on any future uses of the work.

Interested scholars should submit a brief bio (100-250 words) and CV to the executive editor, Danielle Mead Skjelver, at dskjelver@gmail.com.

Danielle Mead Skjelver, PhD
Collegiate Associate Professor, History
University of Maryland Global Campus
