MOORE ABOUT ...

OPEN ACCESS
Open Access makes scholarly outputs such as journal articles freely available online.
Currently, most published research is kept behind a paywall resulting in a lack of access.
Open Access aims to make research results freely available to all.
This has many benefits: more readers means more citations, practitioners can use results and taxpayers get value for money.
Funders also want work to be openly available ... or it won't count for the REF!
There are two main types of Open Access: gold and green.
Gold Open Access means born open content (which sometimes requires a fee to publish)
Green Open Access means sharing a version of the work online and is usually free.
For more about open access see our research support pages.
